# Heartland Hosta & Shade Plant Society

Fall 2006

## President's Message

I hope all of you have had a great summer. I for one am looking forward to some cooler temperatures. I love going out to my garden every day when I come home from work and checking on what's new or what needs tending. During those 100 degree days, even I lost interest in being in the garden.

I'm happy to report that we have a new Board Member. Her name is Charlene Wendel and she'll be taking care of the hospitality duties. I'm sure that Charlene will be a wonderful addition to the Board.

**You need to mark your calendars for the fall meeting on September 16, 9:30 a.m. at the Rolling Hills Presbyterian Church, 9300 Nall, Overland Park, KS.**

**Those who attend the meeting will receive a special bonus — we will be giving away one FREE plant.** We'll have a special table that will contain the bonus plants. As usual, we'll also have plants for sale. There's still plenty of time to plant.

Pat Mora, former President of the club, has been using her digital camera and a computer software program to take pictures of her garden and insert the name of each plant next to its picture. At our fall meet-

ing, she's going to tell us how to use this procedure to map out our gardens. Having your garden mapped out is extremely handy if your garden is like mine and some plant tags get lost each year or the names get faded and you can no longer read what you wrote.

This year with the extreme temperatures and the absence of rain, I've wished many times that I had an irrigation system. Keith Wheeler will speak to us at the fall meeting on how to set up a water-efficient drip irrigation system and what you need to buy. You can set up your own system and be ready for whatever Mother Nature sends our way next year.

The fall meeting will be our last one at Rolling Hills Presbyterian Church because they will be doing some remodeling and will be making changes that will not accommodate us in the future. Next year our meetings and annual sale will be held at Faith Lutheran Church at 67<sup>th</sup> and Roe in Prairie Village.

I'm looking forward to seeing all of you at the fall meeting on September 16.

Kathy

## **BALANCE THE SCALES**

by Mary Chastain, Lakeside Acres

Fall clean up time is just around the corner. Lately I have read articles dealing with how we should leave our hosta gardens for the winter. As in life there is no perfect way that can meet the needs of all. Some articles have been emphatic in the fact that leaving leaves on the garden is the thing to do. I agree with the idea that leaves offer protection for the plants during the winter months and that they also provide nutrients for the soil. They help keep the ground cool in the spring so that hostas are not as likely to emerge too early. This is good and I concur with those things. Other articles have dismissed this fact saying that it is better to remove all of the weeds and old foliage from the garden in the fall. At this time I wish to say, leaves may hold excessive moisture as well as fungi, both of which can be harmful to your hostas. The leaf cover provides space for a well-run hatchery for the proliferation of slugs. Leaving old plant foliage contributes to the spread of fungi and disease that may be present.

My proclamation is that what works for one is not necessarily for the good of all. If you live in a vole infested area letting the leaves remain on the garden will just about guarantee your loss of hostas over the winter. Voles prefer to move and work in a protected environment. They believe that this wonderful blanket of leaves was created just for them. Under this cover they build a network of freeways which takes them from the banquet table of your hostas to the playground where they invite their family,

friends and neighbors to come enjoy the buffet. They laughingly announce that there is plenty for all.

Cleaning the garden of weeds, old foliage and leaves in the fall reduces the chance of spreading disease. It also lowers the risk of vole destruction. It eliminates many of the hiding places for voles and slugs. A clean surface allows for the early spring treatment for slugs and provides easier access for fertilizer. Keeping the slug population low during fall and winter eases your battle for control during the growing season. Removing diseased materials lowers your risk of incurring trouble next year. For example consider the possibility of leaving plants and mulch contaminated with the fungus that causes southern blight. How much more likely you are to be plagued with it the following season.

Once the garden is clean and ready for winter, a thin layer of clean new pine needles can be spread to offer some winter protection and diminish the washing of your soil. A thin cover of pine needles allows air to circulate over the ground. Though they offer some shade protection for your plants they are open enough to discourage the construction of vole freeways.

Now that we have weighed the pros and cons you must balance the scales to meet the situation in your garden. Will the value of leaves in your garden outweigh the disadvantages that they may offer?

## **Heartland Hosta Society Dues**

To ensure your continued newsletter mailings, please make sure you're current on dues. If you're not sure, check your mailing address label for the year next to your name. You are paid up through that year. We ask that you prepay at least 2 years dues at a time.

## **Join the American Hosta Society**

The publications alone are worth the annual dues. Visit the AHS website ([www.hosta.org](http://www.hosta.org)) for the latest membership options.

## **Join the Midwest Regional Hosta Society**

The MRHS (including both KS and MO) publishes two newsletters a year, holds an annual Summer Convention and a Winter Scientific Meeting. Dues are only \$10 per year payable to MRHS.

Send dues to:  
Scott Hildebrandt  
MRHS Treasurer  
1020 Redwood Drive  
Norwalk, IA 50211
